

## Product Data Sheet

# Fuel Injector Cleaner

## For use in gasoline powered automotive engines

### DESCRIPTION

Nemco Fuel Injector Cleaner is specially formulated for use in all domestic and foreign gasoline engines. This high strength fuel injector cleaner will safely remove residue and combustion chamber deposits from fuel injectors and intake and exhaust valves. Nemco Fuel Injector Cleaner dissolves accumulated deposits, quickly restoring lost power and helps smooth out rough idling. Generally only one treatment is necessary to provide a noticeable improvement in performance.

### Advantages

Nemco Fuel Injector Cleaner helps restore engine performance, increases fuel economy, removes moisture, prevents rust, and reduces exhaust emissions. This product is blended with isopropyl alcohol to help remove moisture and prevent freezing in colder climates.

### Directions for use

For best results, add the entire contents of the bottle to an almost empty fuel tank and fill with fuel to thoroughly mix the injector cleaner with the fuel. Do not refuel the vehicle until the tank is almost empty. For extremely dirty systems or clogged injectors, a second treatment may be required (if problems persist, mechanical attention may be required). Treat the system at every oil change or as required. This product will not harm catalytic converters or oxygen sensors. Use the entire contents of the bottle for one treatment.

### Notes

- Nemco Fuel Injector Cleaner contains isopropyl alcohol (IPA), which is a flammable product. Always follow safe handling procedures and store away from sources of ignition.
- IPA can be toxic if consumed. Never drink and always keep away from children.
- To avoid damage, do not spill on painted surfaces.
