

Product Data Sheet

Bar & Chain Oils

Chain Saw Oils

DESCRIPTION

Nemco Bar and Chain Oils are designed to provide optimum lubrication of the chain and guide bar of chain saws. Special tackiness additives are included in the formulations to allow these oils to resist “throw off” at the nose of the bar and to help the oil maintain a lubricant film between the bar and chain. These oils provide excellent anti-wear characteristics to extend chain and bar life.

Nemco Bar & Chain Oil is available in All Season, Light and Heavy viscosity grades to provide for seasonal temperature variations from -35°C to +40°C. All Season Chain Oil is designed for year round use. Light Chain Oil is designed for winter use and Heavy Chain Oil is designed for summer use.

Typical Characteristics – Bar & Chain Oils

Test	All Season	Light	Heavy
SAE Grade (Approximate)	10W-30	20	40
Colour	Red	Red	Red
Viscosity at 100°C	7.78	6.73	12.95
Pour point °C (°F)	-33 (-27)	-35 (-31)	-16 (+3)

Physical characteristics shown in the table are typical and may vary slightly.
