

## Product Data Sheet

# Nemco Rustillo

## Low Viscosity Preservative Oil

### DESCRIPTION

Nemco Rustillo is a low viscosity preservative oil formulated by using a high quality petroleum solvent and Group II base oils, and an additive package that provides this low viscosity oil with anti-rust, anti-corrosion and anti-wear properties. The anti-corrosion properties of this oil provide protection for your equipment or container between operations and in storage. As the solvent evaporates, the very thin residual film provides effective protection against corrosion and suppresses any corrosive attack resulting from fingerprints on the components.

### Advantages

- Excellent corrosion protection
- Low viscosity, easy spray application
- Economical, good value
- Low pour point, excellent for cold winter protection

### Applications

- High speed machine tool spindles and hydraulic applications
- Ideal medium for cooling and flushing applications in lower temperature
- Equipment or containers going into storage and requiring anti-corrosion and anti-rust protection

### Notes

- Nemco Rustillo is a solvent based product; it is a flammable product, keep away from sources of ignition and always follow safe handling procedures.
- For further information in storage and handling, consult the Safety Data Sheet (SDS).

### Typical Characteristics

Characteristic	Method	Target
ISO grade		2
Pour point °C (°F)	D-97	-40
Viscosity at 40°C	D-445	2

*Physical characteristics shown in the table are typical and may vary slightly.*
